ACCPAC®

Warehouse Management System
ACCPAC Warehouse Management System™ is designed to automate your materials-handling processes and increase productivity across your warehouse.

**PEAK PERFORMANCE**

Today, more than ever, companies must operate at maximum efficiency and provide superior service to ensure profitability. Your ability to effectively manage your warehouse, reduce costs and ensure smoothly run sales and fulfillment operations is critical to your success. From receiving inventory and timely order fulfillment to automated validation of warehouse activities and accurate inventory control, your warehouse operating system must be designed to achieve peak performance across the entire enterprise.

ACCPAC Warehouse Management System (WMS) is a powerful, feature-rich solution for automating the materials-handling processes of retailers, manufacturers, distributors and third-party logistics providers. By integrating advanced radio-frequency (RF) and barcoding technologies with core warehousing functionality, ACCPAC WMS™ provides comprehensive fulfillment center and warehouse management solutions that include order management, receiving, stocking, replenishment, picking and other related warehouse tasks.

**MAXIMUM EFFICIENCY**

ACCPAC WMS is a complete warehouse management solution specifically designed to increase inventory-handling accuracy, improve allocation of human resources within the warehouse and reduce carrying costs associated with obsolete and slow-moving stock. With ACCPAC WMS, you can efficiently pick, pack and ship orders – putting nearly 100 percent picking and shipping accuracy within your reach.

ACCPAC WMS scales to accommodate the varied demands of small to highly complex, high-volume distribution centers and works in conjunction with ACCPAC Advantage Series™ and ACCPAC Pro Series™. Additionally, ACCPAC WMS is specifically designed to interface with industry-standard shipping systems that enable an automated picking, packing and shipping solution. This unique and seamless integration capability allows ACCPAC WMS to effectively orchestrate the movement of personnel and inventory. As a result, multiple orders can be picked in a single wave by one or multiple warehouse pickers, saving time and money.

“Accpac WMS scales to accommodate the varied demands of small to highly complex, high-volume distribution centers.”

Managers and supervisors use a single interface to access visibility of warehouse processes and inventory levels.
COMPLETE CONTROL
ACCPAC WMS utilizes RF and barcoding technologies, creating a powerful picking, packing and shipping warehouse management solution. ACCPAC WMS makes order fulfillment easy by allowing warehouse managers to view which orders can be filled immediately. Equipped with RF-based terminals, warehouse personnel are given explicit directions for picking every order such as quantity, location and other carton-specific requirements. With ACCPAC WMS, you’re in control, guiding warehouse personnel to the right location, automatically generating shipping labels on demand and indicating the right size box for the order.

Whichever picking style works for your warehouse – wave, batch, simultaneous or sequential zone – ACCPAC WMS manages the process efficiently and cost effectively. Picking inventory in a warehouse that is managed by ACCPAC WMS means never having to look for missing stock or walking aimlessly around the warehouse to fulfill customer orders.

With ACCPAC WMS all your warehouse activities operate at peak performance, enabling your enterprise to:

- Increase order accuracy
- Eliminate paper error
- Pick and pack concurrently
- Fill multiple orders simultaneously
- Track inventory in real time
- Print packaging slips on demand
- Increase customer satisfaction
- And more!

FULL PRODUCTIVITY
ACCPAC WMS offers you the ability to maximize the productivity of your warehouse personnel. By maintaining detailed information on the flow of inventory from both “pick” and “overstock” locations, your staff is directed to a specific bin knowing the item will be there every time. Furthermore, requests to replenish pick bins can be managed during off-peak hours or coordinated to run simultaneously with picking activities without interruption.

Orders are sent via RF to the warehouse floor from the ACCPAC WMS browser-based application for effective order fulfillment.
ACCURATE RECEIVING AND SHIPPING

From receiving to shipping, ACCPAC WMS™ increases productivity and accuracy across all warehouse activities.

REAL-TIME VISIBILITY AND DATA
Visibility and information are key to productivity. ACCPAC WMS’ Web dispatch screen serves as a repository for all mission-critical information needed to manage your entire warehouse operation. From the Web dispatch screen, orders can be closely monitored, managed and distributed. With this easy-to-use browser-based interface, ACCPAC WMS enables a complete view of all warehouse activities that extends far beyond the walls of the warehouse. As a result, you’ll be able to generate and share reports on location, inventory levels and movement, and other critical data in real time.

ON-TIME DELIVERY
Your customers count on you to deliver the right product – on time, every time. Sending the wrong package or items to a customer is more than just embarrassing – it drives up costs and affects credibility. Add the cost of compliance fines and violating service level agreements, and it’s clear – the shipping dock is your last chance to ensure your shipments are perfect – every time. With ACCPAC WMS inventory is tracked throughout the handling process and finalized during shipment, in turn eliminating costly errors while delivering industry-leading service and delivery excellence.

ACCPAC WMS offers a streamlined shipping solution that produces shipping labels, packing slips, carton-content labels and advanced shipping notices on demand, eliminating errors in transcription from customer orders. ACCPAC WMS also automatically estimates shipping weight based on the items in the order. When integrated with a multi-carrier shipping system, ACCPAC WMS offers you the ability to shop for the best shipping rates, improving your bottom line and heightening customer satisfaction.

REDUCED LABOR COSTS
ACCPAC WMS saves on labor costs by significantly reducing the need for dedicated shippers and checkers, freeing warehouse personnel for other activities. Upon completing an order, shippers simply tape up the box and put it aside for the carrier. With ACCPAC WMS, you know exactly what’s going out the door and can give your customers the immediate shipment information they need. Equally important, your ACCPAC Inventory Control and Order Entry modules are immediately updated. As a result, everyone across your organization, from your warehouse personnel to your customer service department, is provided complete access to all order shipment information in real time.

Real-time inventory information ensures that the right goods are shipped in the right carton to the right customer – the first time, every time.
EFFECTIVE RECEIPT AND PUTAWAY

ACCPAC WMS™ is a total RF-based solution that effectively automates your inventory receipt and putaway processes, facilitating timely and accurate order fulfillment.

ERROR-FREE ORDER FULFILLMENT
The ACCPAC WMS receipt and putaway solution effectively moves goods from your receiving dock to your warehouse and into the right location. ACCPAC WMS is a total RF-based solution that effectively automates your inventory and putaway processes, facilitating timely and accurate order fulfillment by creating an optimized order-picking environment for warehouse personnel. Tightly integrated with your ACCPAC Purchase Order module, ACCPAC WMS eliminates receiving errors by matching the receipt of goods through barcoding and original purchase order details, while reporting any discrepancies.

ACCPAC WMS is designed to ensure a highly-efficient receiving environment and allows for greater control in the allocation of human resources, while eliminating the introduction of transcription errors. You can assign multiple employees to the receipt and putaway of large inbound shipments, or multiple receipts can be simultaneously checked-in by a single employee. ACCPAC WMS also notifies warehouse staff if a received good is needed to fulfill a customer back order. In this event, instead of moving the item to inventory, it is prepared for shipping and sent directly to the awaiting customer.

During putaway, ACCPAC WMS allows you to capture important information about incoming items such as weight, size, expiration date and more. ACCPAC WMS can be configured to store products either in a designated location and/or multiple locations throughout the warehouse – accelerating the putaway process. ACCPAC WMS also enables high-volume processing of inventory during peak seasons. The final phase of receipt and putaway processing is the automated update of purchase orders and inventory information into your ACCPAC® accounting system. This automation eliminates manual intervention and errors, while providing accurate and up-to-date inventory control.

"With ACCPAC WMS, you know exactly what’s going out the door and can give your customers the immediate shipping information they need."
ACCPAC WMS™ gives you complete control over your inventory, saving you time and money while increasing your performance and bottom line.

OPTIMAL INVENTORY BALANCES
ACCPAC WMS provides accurate and immediate information on the quantity, location, condition, status and history of any item in your warehouse – at any time. Fully integrated with ACCPAC Pro Series™ and ACCPAC Advantage Series™, ACCPAC WMS ensures complete control and flow of information between your back office and warehouse floor. An easy-to-use browser-based interface provides the ability to generate reports and track inventory movement across your entire enterprise.

ACCPAC WMS gives you complete control over your inventory and offers you a clear picture of your warehouse activities. This includes up-to-the-minute notifications of when replenishment is needed, a full audit report of every product moved through your warehouse and automatic updates to your ACCPAC Inventory Control module. In addition, ACCPAC WMS dramatically improves the accuracy of physical inventory counting by date, product and bin location using advanced barcoding technology. With complete inventory control management – down to the contents of specific bins – you can increase productivity and save on warehouse labor costs. ACCPAC WMS supports “first in, first out” (FIFO) and “last in, first out” (LIFO) stock rotation, serialized inventory, lot and expiration-date tracking, and other key inventory control functions, enabling complete control over shipped products.

ACCPAC WMS gives you the flexible, automated support you need to efficiently run a fast-paced, high-volume and accurate warehouse operation. With ACCPAC WMS, you can optimize warehouse resources and reduce costs by automating pick, putaway and replenishment functions, and integrate barcode and wireless RF-based terminals to enable accurate and efficient tracking of goods through your facility.

Discover the power of ACCPAC WMS and its feature-rich functionality that allows you to:
- Obtain 99.9% accuracy
- Create a paperless warehouse
- Access real-time warehouse data
- Minimize handling steps
- Support both FIFO and LIFO stock rotation
- Enable wave receiving and shipping
- Control stock movement and replenishment
- Generate barcodes and shipping labels on demand
- Satisfy customers
- And more!
ACCPAC® is a global provider of award-winning end-to-end business management applications for mid-market enterprises.

ABOUT ACCPAC
For more than 20 years, ACCPAC has provided dependable software solutions optimized to take advantage of new technologies and meet the unique requirements of companies like yours. Integrating powerful front-office Web and wireless capabilities with back-office accounting and operations, ACCPAC helps you enhance competitive advantage and increase profitability.

Look to ACCPAC for fully integrated business management applications that deliver high performance, advanced functionality, cross-product integration and unmatched freedom of choice. ACCPAC delivers the solutions that work best for your business today, with the ability to upgrade and modify your system as business expands in the future – which means an investment in ACCPAC is an investment that stands the test of time.

With a global network of more than 6,500 well-trained and experienced Business Partners and more than 500,000 registered clients, ACCPAC has helped companies around the world gain strategic advantages designed to take businesses like yours confidently into the future.
